STATISTICAL REPORT

OF THE

DECIDUOUS FRUIT EXPORT SEASON, 1939-40

Summary

Reduced shipments to Europe because of wartime disruption of international trade were responsible for the substantial decline in exports of deciduous fruit and fruit products from the United States during the 1939-40 season, July to June. Shipments to markets outside Europe were maintained or, in some cases, increased but, except for fresh grapes, these markets account for only a small proportion of the normal export movement. Of the 14 products covered in this report, only exports of canned fruit salad and cocktail were above the movement during the 1938-39 season, while the other commodities registered declines of between 14 and 90 percent. Exports of fresh apples in boxes, in baskets and barrels, fresh pears, dried apples, dried apple waste (except pomace), dried pears, prunes, canned apples and applesauce, and canned pears were below the 5-year average, 1931-32 to 1935-36.

Compiled from official sources.

a/ Based on quantity exported.

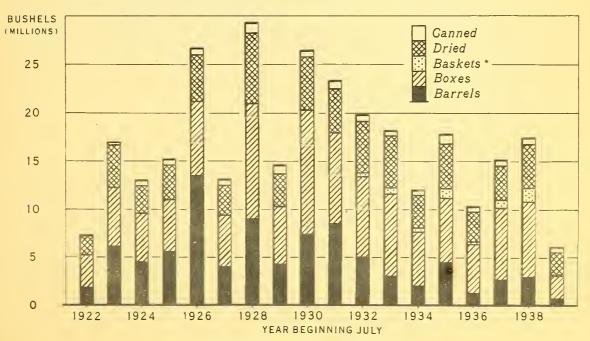

b/ 1932-33 to 1935-36 average.

c/ 1934-35 to 1935-36 average.

Generally speaking, exports of fresh apples and pears were more severely curtailed then were exports of the canned fruit products. Exports of dried fruit also declined substantially since trade with the countries of continental Europe, which normally absorb the bulk of most of these exports, was seriously interfered with and late in the season virtually cut off by the extension of the war.

The European war, which had such an important adverse effect upon American fruit exports during the past season, seriously disrupted fruit trade between exporting and importing countries in all parts of the world. Importing countries in Europe, shortly after its outbreak, took steps to control and restrict imports of fruit. As the war spread, fruit exporting countries outside Europe found their European outlets more and more restricted. A representative list of wartime government control measures affecting international trade in fruit and fruit products, which are directly or indirectly the result of the war, will be found in the special Appendix to this report. Factors other than governmental controls of various types contributed to the reduction in the volume of fruit trade. Shipping risks and higher shipping costs, belligerent blockades, delays in transit and actual shortage of shipping space adequate for transporting fresh fruit arose out of the war situation as restrictive influences during the 1939-40 season.

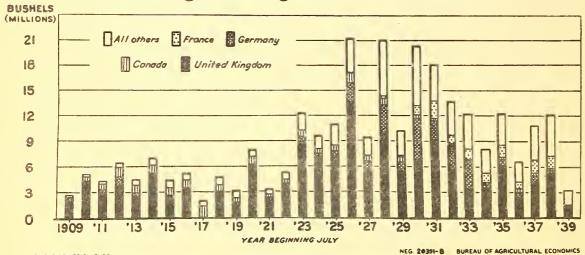

APPLES: UNITED STATES EXPORTS, 1922-39

Apples

Exports of apples in all forms represented the equivalent of 6.1 million bushels of fresh fruit, or only 4.3 percent of the United States commercial apple crop. This is considerably smeller than the movement of 17.3 million bushels during the season previous and an average of 18.2 million bushels during the 5 years, 1931-32 to 1935-36. Exports of fresh apples totaled 3.2 million bushels, dried apples to an equivalent of 2.4 million bushels and canned apples and applesauce to .5 million bushels of fresh fruit.

Apples: United States Exports and Quantities Taken by Leading Importing Countries, 1909-39

U. S. DEPARTMENT OF AGRICULTURE

Severe reduction in fresh apple exports

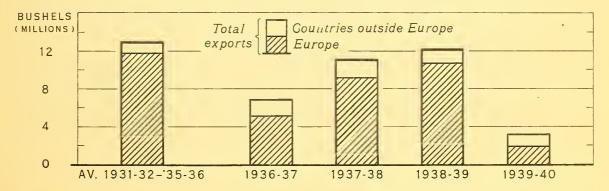

Exports of fresh apples from the United States during the 1939-40 season amounted to only 3,215,500 bushels or 26.6 percent of the movement in the previous year. This is the smallest volume exported since 1921-22. In fact, during the past 30 years, exports have been below the 1939-40 volume only during the 2 seasons, 1917-18 and 1921-22. Reduced takings by European belligerents and the wartime disruption of trade with European neutral countries were largely responsible for the decline. The record 1939 apple crop in the United Kingdom and heavy crops in most European countries contributed to the reduction in exports to Europe.

Exports to European countries dropped more than 8.750.000 bushels while those to countries outside Europe were nearly 100,000 bushels less than the movement ir 1938-39. Shipments to Europe accounted for only 60 percent of the total compared with an average of 91 percent during the 5 years, 1931-32 to 1935-36. Among European countries, only the United Kingdom and Sweden took a significant volume of fresh apples. The United Kingdom with 1,426,100 bushels accounted for 44 percent of the total. From the beginning of the season, shipments to the United Kingdom were somewhat below those during 1938-39. The United Kingdom embargo of Movember 20 on imports from the United States, however, caused exports to dwindle to a very low level, although some shipments were made after January 1 in fulfillment of contracts made earlier in the season. The late movement of Pacific Northwest boxed apples was particularly affected by this embargo. Exports to Sweden, which amounted to 270,000 bushels, were less than 50 percent of the 1938-39 volume. Apple exports at \$1.34 per bushel, however, averaged slightly above the value during the preceding season.

Exports to countries outside Europe were only slightly affected by the war. Shipments to Palestine, Egypt and other Mediterranean countries were reduced somewhat as an indirect effect of hostilities, but the interruption of Mediterranean trade did not occur until after the season was practically closed. Exports to Brazil, Argentina, Cuba, Mexico and the Philippine Islands, on the other hand, increased during the season.

Monthly data on exports clearly reflect the effect of the war on apple shipments. After December 1 (that is, just after the British embargo of November 20) only 34.5 percent of the season's total export was shipped, compared with 62.9 percent in 1938-39 and the average of 54.7 percent during the 5 years, 1931-32 to 1935-36.

U. S. EXPORTS OF FRESH APPLES, JULY-JUNE

U. S. DEPARTMENT OF AGRICULTURE

NEG. 38800 OFFICE OF FOREIGN AGRICULTURAL RELATIONS

Boxed apple movement at 29 percent

Exports of apples in boxes amounted to 2,250,700 boxes or 29 percent of shipments during the previous season. The boxed apple movement was the lowest since 1921-22. European countries took 1,201,700 bushels or 63 percent of the total, compared with 6,620,300 boxes or 85 percent during the previous year. The United Kingdom with 791,400 and Sweden with 211,400 boxes were the only important markets in Europe. Cutside Europe, the Philippine Islands with 161,600 boxes, Brazil with 129,200 boxes, and Cuba with 99,100 boxes were the principal importing countries. Exports of apples in boxes amounted to only 5.2 percent of production in the 8 western states, compared with an average of 13.9 percent during the previous 5 years.

Barrel and basket exports sharply curtailed

Exports of apples in barrels amounted to 273,800 or 28 percent of the previous season's movement. Reduced exports to Europe accounted for most of the decline. The United Kingdom with 194,100 barrels was the principal market, accounting for 71 percent of the total. Sweden, Argentina, and Palestine were the only other countries to take more than 10,000 barrels.

Exports of apples in baskets declined even more sharply, amounting to only 143,400 baskets or about 10 percent of the record shipments of the 1938-39 season. 1/ The United Kingdom, Canada, Cuba, and Pelgium, which took 64 percent of the movement during the previous season, accounted for only 13 percent in 1939-40. Shipments of apples in barrels and baskets amounted to only 1 million bushels and was the smallest export reported during the past 2 decades. Exports amounted to only 1.4 percent of the commercial crop in the 15 important eastern apple producing states compared with an average of 6.3 percent moving into export during the previous 5 years.

New York principal port of export

New York, with 41 percent of the total, was the principal port of fresh apple exports. About 21 percent of the total boxed movement and 86 percent of shipments in barrels and baskets were cleared through this port. These apples were principally from eastern producing areas, although substantial quantities of Pecific Coast boxed apples were shipped overland and exported from New York. Seattle, Portland and San Francisco, which follow New York as ports of export, accounted for 64 percent of boxed apple shipments. Shipments from these ports were boxed apples produced in the western fruit regions.

^{1/} The box-crate has been used much more extensively in the Eastern apple regions in recent years, and, although they are not shown separately in the statistics, exports of Eastern apples in box-crates have expanded considerably.

Dried apple shipments halved

Exports of dried apples amounted to only 8,370 short tons, or 48 percent of the movement during 1938-39. The movement was the smallest reported since 1922-23. Exports to Europe, which amounted to 7,653 tons, were about half those of the previous season while shipments to countries outside Europe increased slightly. The Netherlands was the most important market, taking 39 percent of the total, followed by Sweden and the United Kingdom with 18 percent each. Dried apple shipments amounted to only 33.5 percent of the United States production, compared with 71.9 percent of the production exported in 1938-39 and an average of 68.9 percent between 1931-32 to 1935-36. Value improved somewhat, averaging \$153 per ton.

Exports of dried apple waste were especially hard hit by the war since a good portion of the product which moves into the Netherlands, Belgium and France is reshipped into Germany for the German processing industry. The movement totaled only 167 short tons or 10 percent of shipments during the preceding season. The effect of the war on exports is shown by data on monthly shipments. During July and August exports were normal, amounting to 144 tons, while less than 25 tons moved during the 10 months, September to June.

Canned apples only slightly reduced

Exports of canned apples and applesauce were less severely affected by the war than were shipments of other apple products. Exports amounted to 259,000 cases (50 pounds) or about 40,000 cases below shipments in the previous season but around 20,000 cases above the movement in 1937-38. The United Kingdom as usual took practically the entire export. Besides that country, only the Netherlands, the Philippine Islands and the Netherland Indies took more than 1,000 cases. Exports amounted to only 6.5 percent of the above-average United States pack, compared with an average of 11.8 percent during the 5 years, 1931-32 to 1935-36. Value for exports which averaged \$2.18 per case equalled the value during the preceding season.

Imports increased substantially

Imports of apples from Canada into the United States emounted to 107,000 bushels or over double the import volume in the 1938-39 season. Total imports were substantially above the average for the 5 years, 1931-32 to 1935-36, but below the previous 10-year average of 239,000 bushels.

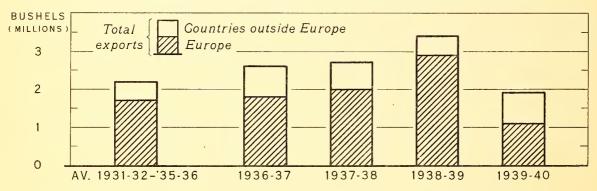

Fears

Exports of pears in all forms amounted to about 4,500,000 bushels (50 pounds) or 112,497 short tons of fresh fruit compared with the record movement of about 6,905,000 bushels or 172,625 tons during the previous season and the average of 5,153,000 bushels or 128,827 short tons during the 5 years, 1931-32 to 1935-36. Fresh exports amounted to 1,861,000 bushels or 46,530 tons, canned pears represented the equivalent of 36,209 tons of fresh fruit, and dried pears to 13,561 tons fresh. The amount of fresh pears exported in canned salad and cocktail is calculated at around 9,042 tons, while 7,155 tons was shipped in the form of dried fruits for salad (dried fruit compote).

Fresh exports drop sharply

The rapidly upward trend in United States exports of fresh pears over the past 20 years was checked and sharply reversed during the 1939-40 season. Exports amounted to 1,861,000 bushels or about 54 percent of the record volume shipped in the preceding season. This was the smallest

U. S. EXPORTS OF FRESH PEARS, JULY-JUNE

U. S. DEPARTMENT OF AGRICULTURE

NEG.38801 OFFICE OF FOREIGN AGRICULTURAL RELATIONS

export volume since the 1931-32 season. Exports to European countries dropped 1,800,000 bushels while the movement to countries outside Europe increased nearly 250,000 bushels. As usual, the United Kingdom was the most important importing country, accounting for 47 percent of the total,

followed by Canada with 28 percent, and Brazil and Sweden with 7 percent each. The major declines in shipments were to European countries while exports to Canada were almost doubled and those to Brazil increased somewhat. Exports amounted to about 8 percent of that portion of the United States pear crop used fresh, compared with the 13 percent exported fresh in 1938-39.

The 1939 West Coast production of late winter pears was somewhat below the record crop of the preceding season. Exports of late winter pears amounted to about 29 percent of production, compared with 50 percent shipped in 1938-39. Preliminary estimates, subject to revision, indicate that the proportion of the 1939 crop of leading varieties of Pacific Coast winter pears moving into export were: (1938 figures in parenthesis) Hardy 72 (98) percent; Winter Nelis 2/78 (79) percent; Comice 42 (64) percent, Anjou 16 (37) percent; and Bosc 4 (10) percent.

Canned pear exports decline

Exports of canned pears amounted to 1,376,000 cases (45 pounds) or about 80 percent of those in the previous season and 85 percent of the average between 1931-32 to 1935-36. Value averaged \$4.48 per case, which is about 40 cents above the average for 1938-39. The United Kingdom, with 92 percent of the total, took practically the entire movement. Exports of canned pears were about 33 percent of the Pacific Coast pack for the season, compared with 41 percent in the previous season.

The movement of canned salad fruit and cocktail, on the other hand, reached an all-time record high despite the war. Exports totaled 1,031,000 cases or about 72,000 cases above those in 1938-39. The United Kingdom accounted for the increase, taking 894,000 cases or about 70,000 cases more than in the previous year. Value average \$4.70 or 35 cents a case higher than in 1938. Pears constitute about one-third of the canned salad mixture.

Substantial reduction in dried pear movement

Exports of dried rears totaled 2,466 short tons, or about 57 percent of the abnormally high movement during the previous year. Shipments were the smallest since 1929-30. Exports to Europe accounted for 90 percent of the total, with the Netherlands taking 35 percent of total shipments, the United Kingdom 25 percent and sweden 14 percent. Exports to France, which accounted for most of the drop, declined by 951 short tons, amounting to only about 11 percent of the 1938-39 movement. Value increased \$2 per ton, averaging \$138 a short ton for the season.

^{2/} The major portion of the Yakima Winter Nelis crop was not harvested. Winter Nelis exports in the 1939-40 season totaled 351,000 bushels, compared with 723,000 bushels in the previous season.

Shipments of dried fruit compote (dried fruits for salad) were also reduced by the war. Exports totaled 7,806 short tons or about 75 percent of shipments in the 1938-39 season. This volume, however, was about the average for the previous 5 years. The relatively high level of exports is partially due to the fact that sweden, which is by far the most important market, was not involved in the war. Value dropped \$10, averaging \$104 per ton.

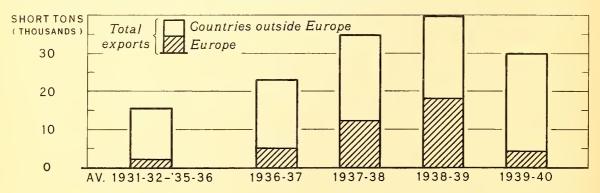

Exports of dried pears and pears in exports of dried fruit compote amounted to about 46 percent of the heavy 1939 dried pear production in California, compared with 93 percent shipped in 1938-39.

Pear imports expanded

United States imports of pears from Argentina totaled 237,900 bushels or nearly 3 times the volume received during the preceding season. The bulk of arrivals came during February and March, although shipments ranged between 14,000 and 25,000 bushels between April and July. Imports, therefore, primarily competed with the marketing of late winter varieties of Pacific Coast pears after February.

Grapes

U. S. EXPORTS OF FRESH GRAPES, JULY-JUNE

U.S. DEPARTMENT OF AGRICULTURE

NEG.38802 OFFICE OF FOREIGN AGRICULTURAL RELATIONS

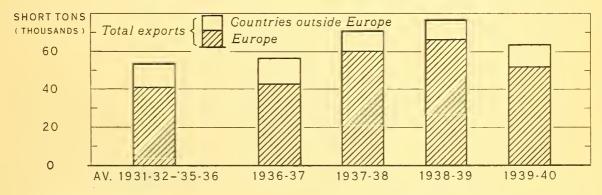

Exports of fresh grapes totaled 29,980 short tens or about 75 percent of the 1938-39 movement. Reduced exports to Europe, and especially to the United Kingdom, Sweden and Finland, account for most of the decline.

Exports to Europe as a whole were only 23 percent of those in 1938-39. While the European war adversely affected shipments, a substantial decline in United States exports to Europe was anticipated, in any case, with the ending of the civil war in spain. During that war, Spanish supplies were very restricted and United States exports to Europe reached abnormal proportions.

Shipments to countries outside of Europe increased by 4,000 tons, with Mexico and Canada accounting for most of the expansion. Canada again became the most important export market for United States grapes, accounting for 52 percent of the total. Because of the abnormally heavy movement to Great Britain in the 1938-39 season, Canada had dropped to second place. Value averaged \$73.28 per short ton, or about \$18 below that of 1938-39. Exports amounted to about 7.7 percent of the California production of table grapes.

Raisins and Prunes

U. S. EXPORTS OF DRIED RAISINS JULY-JUNE

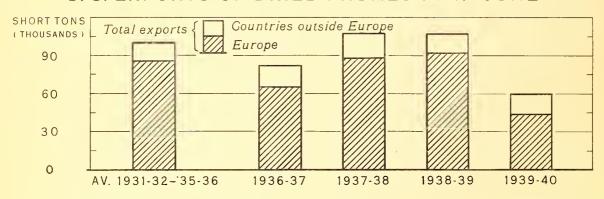

U. S. DEPARTMENT OF AGRICULTURE

NEG. 38804 OFFICE OF FOREIGN AGRICULTURAL RELATIONS

Exports of raisins and prunes were also adversely affected by the war. Raisin exports amounted to 63,390 short tons packed (68,500 tons natural condition basis) or about 83 percent of the 1938-39 movement. European countries accounted for 81 percent of the total. The United Kingdom with 30 percent, the Netherlands with 17 percent, and Sweden with 13 percent accounted for the major portion of shipments. Substantial

increases in exports took place to the Netherlands and Canada, while exports to the United States and France were severely curtailed. Exports averaged in value \$95 per ton, a decline of \$2.

U. S. EXPORTS OF DRIED PRUNES JULY-JUNE

U. S. DEPARTMENT OF AGRICULTURE

NEG. 38803 OFFICE OF FOREIGN AGRICULTURAL RELATIONS

The reduction in shipments of prunes was more drastic. Exports amounted to 59,523 short tons or about 56 percent of those during 1938-39. European countries accounted for 73 percent of the total compared with 86 percent during the preceding season. Reduced shipments to Europe were responsible for the low level of exports. The movement to France, Germany, Belgium, the Netherlands, and "other" Europe was substantially below that of the previous season. Value per short ton increased \$12 over the average for the 1938-39 season.

^{1/} In terms of fresh fruit.

^{2/} Commercial production refers to the production of apples in the commercial apple counties of each State and is not comparable with former "commercial" estimates, which represented sales for fresh consumption only in the entire State.

^{3/} One pound dried apples equals about 7 pounds fresh apples.

^{4/} One pound canned apples equals about 2 pounds fresh apples.

^{5/} Not available.

^{6/} January to June only.

Barrel equals 3 boxes or 3 bushels.

The commercial crop is defined as that portion of the total crop that moves into commercial channels in fresh or processed form. This production series contains the latest revised estimates of the Canadian Government and is not comparable with the series previously appearing in these annual reports.

Data on exports are from Canadian Department of Agriculture.

^{1/3} British Columbia only. The box, the commonly used container, equivalent to 1/3 barrel.

^{2/} Nova Scotia, New Brunswick, Quebec, and Ontario. Includes exports in half-barrels, hampers, and boxes.

Compiled from official sources.

l/ Production of table varieties in California (Emperor, Tokay, Malaga, Red Malaga, Cornichon, Almeria, Ribier). Significant quantities of table grapes are used for wine and juice, and grapes of raisin varieties are consumed fresh. Exports, however, come principally from California and consist almost entirely of the varieties that are classified as table varieties.

^{2/} Dry basis.

^{3/} Exports converted from a packed-to-a-natural-condition basis by multiplying by 1.08.

^{4/} January to June only. The bulk of export shipments takes place in the July-to-December period.

APPENDIX

Wartime Control Measures, 1939-40 Season

Note: Below is a tabulation of wartime control measures on deciduous fruit and fruit products as received in this Office. In many cases, information may be incomplete, or modified, or revoked by subsequent legislation, details of which have not been received. These, however, are presented as indicative of the types of control and relief measures which have been instituted since the outbreak of war. Readers are cautioned accordingly in their use of this material and advised to seek the latest available information in all cases in which their interests are directly affected.

Restriction and control measures on trade in fresh, dried and canned deciduous fruits have been put into effect by governments in both belligerent and neutral countries all over the world, as a direct or indirect consequence of the war. Measures instituted by European importing countries were primarily designed to control or restrict imports of fruits and fruit products, and these played a major role in the substantial reduction of United States exports to most of these countries during the pest season. Two factors were important as background in the formulation of policy in many of these countries: (1) under wartime conditions, those materials and foodstuffs regarded as more essential than fruit and fruit products were given priority in allotting foreign exchange and shipping space, thereby making it desirable, as in the case of the United Kingdom, to restrict imports or, in the case of France, to reduce them to negligible proportions; and (2) generally speaking, 1939 crops of home-grown fruit in most European countries were substantially heavier than those during the short 1938 season. Policy in neutral countries was concerned primarily with supplying internal foodstuff requirements and with supervising trade with belligerent and other neutral countries.

The fruit exporting countries, on the other hand, were confronted with quite dissimilar problems. Having built up or expanded their fruit industries during the past 20 years to supply an expanding oversea demand, these countries were temporarily faced, as a result of the shrinkage of normal export outlets, with the problem of disposing of large surpluses under highly abnormal marketing conditions. Consequently, relief measures of many types were designed to assist fruit growers in marketing their crops.

The list below contains measures of both types. For greater details as to the organization and operation of such legislation and for analysis of the effect of these measures, and the effect of the war, on the world fruit situation, the reader is referred to reports in the weekly publication, "Foreign Crops and Markets", prepared in the Office of Foreign Agricultural Relations. This publication released incoming information throughout the 1939-40 season and continues to publish such data from time to time.

United Kingdom 2/

Regulations issued under authority granted in the Emergency Powers (Defense) Act (Aug. 24), 1939. Under this Act, the Defense Regulations, 1939 (Aug. 25) were promulgated.

September 2, 1939. Board of Trade order prohibited imports of all fresh fruits except apples, pears, bananas and citrus, except under license.

September 5. Imports of nuts made subject to license.

September 7. All stocks of dried fruit in the United Kingdom, those British-owned outside the country, and all subsequent imports were required to be placed at the disposal of the Ministry of rood. Imports made subject to license.

September 21. Maximum wholesale prices of dried fruit were fixed, effective immediately. Dried fruit stocks, which had been requisitioned previously, were to be allocated equitably to dealers, including the pooling of grades. Retailers were required to sell to consumers not a single-grade product but a blend of several different grades. The maximum wholesale prices for prunes, peaches, nectarines, and currants were changed on October 27. The following table shows the maximum wholesale prices for dried fruit in effect in the United Kingdom, as of November 25, 1939.

UNITED KINGDOM: Maximum fixed prices for dried fruit,

Conversions made at \$4.02 to the pound sterling. The following extra charges were authorized under the order issued October 27: Raisins seeded after arrival in United Kingdom, 10.5 shillings (\$2.11) per hundredweight of 112 pounds; for truit (other than dates or figs) sold in cartons under registered brands, 14 shillings (\$2.82) per hundredweight.

^{2/} For fuller details, see "British Wartime Control of Agriculture and its Products", by H. L. Franklin, in "Foreign Agriculture", December. 1939, published by the Office of Foreign Agricultural Relations.

September 27. Soit fruits from countries outside the Empire not permitted to be imported.

September 28. Imports of grapes from the United States, under license from September 5, restricted to 25 percent in sterling value of imports during 1939.

Cctober 14. Between October 17 and October 31, unrestricted imports of grapes from all countries permitted.

November 15. Imports of fresh apples and pears subject to license effective November 20. Applications for imports from non-Empire countries, including United States, were not to be considered by the Board of Trade. Imports from Canada limited by agreement to 50 percent of the average for the 2 previous seasons.

January 29, 1940. Scheme for controlling dried fruit trade revised. The basis for the new wholesale price system was the issue price, or the price at which the Ministry sold to wholesalers. Wholesalers were permitted to charge retailers a maximum of 7 shillings per hundredweight of 112 pounds or 1.26 cents per pound (plus certain allowable additional expenses) in addition to the basic issue price. Under the former arrangement, the wholesalers were required to sell the fruit to retailers at the same price at which they purchased the produce from the Ministry and were permitted, in turn, to claim compensation from the Government for their services. The new plan, by eliminating the provision which gave wholesalers a fixed return payable by the Government for their services, restored competition among dealers.

American Embassy, London. Converted at \$4.025 to pound sterling.

The retail price system was also drastically altered. Under the old plan, retailers were required to sell their produce at a fixed maximum price which included their profit. They were also required to blend all grades of each variety of dried fruit and sell the consumer a blended, and not a single-grade, product. Retail prices under the newer system varied according to both size and grade of each variety of dried fruit. The retailer's maximum profit margin was based upon the wholesale price paid for the variety of dried fruit as follows:

UNITED KINGDOM: Retail price of dried fruit and maximum gross profit margin

į.

American Embassy, London.

Merch 19. Imports of canned, bottled and preserved fruit prohibited except under license.

British Empire

Eire

November 7, 1939. Imports of fresh apples prohibited except under license.

Gibraltar

October 10. All imports and exports subject to license.

Canada 3/

November 1939. Exports to United Kingdom limited by agreement to 50 percent of average exports during the 2 previous seasons. Canadian quota divided between British Columbia, Nova Scotia, and Ontario.

a/ Issue price plus 7 shillings per hundredweight of 112 pounds.

b/ Maximum additional charge permitted above price paid by retailer.

^{3/} See also "Canada Wartime Agricultural Measures" by C. C. Taylor in "Foreign Agriculture", June 1940.

Relief measures included:

- 1. Establishment of Nova Scotian Apple Marketing Board to control marketing of Nova Scotian crop and pool returns on sales to all channels. Government subsidy to encourage processing.
- 2. Market zoning regulation, whereby shipments from producing provinces were restricted to specific provinces within Canada.
- 3. Government guarantee of minimum return on fresh exports to Europe.
 - 4. Government-assisted advertising scheme to stimulate consumption.

Australia

September 9, 1939. Sales tax of 6 percent of value placed on imported goods as calculated in Australian currency.

September 25. Exports of all goods placed under license issued by the customs authorities. All papers relating to export shipments must be surrendered to the Commonwealth Bank, which reimbursed shippers in Australian currency for amount of shipments.

March 1, 1940. Government acquired 1940 apple and pear crops.

Marketing in hands of Commonwealth Apple and Pear Control Board which gave an advance of 2/0 (0.32 U.S.) per box on apples and 3/0 (0.48 U.S.) on pears against the aggregate realization on the crop.

New Zealand

December 18, 1939. Government announced intention of purchasing apple and pear crop at average price of 5/0 (0.80 U.S.) per box at assembly points. Internal Marketing Department conducted purchases and sales for both domestic and export business.

South Africa

South African Deciduous Fruit Regulatory Scheme instituted by Government to (a) provide financial assistance to finance the hervesting of the 1940 crop; and (b) encourage diversion of fresh fruit into byproducts.

France 4/

Regulations issued under law of July 11, 1938 on the "General Organization of the Nation in Time of War".

^{4/} For further details, see "French Wartime Control of Agriculture" by N. W. Hazen, in "Foreign Agriculture", January 1940.

- September 2, 1939. Imports of all foreign merchandise, including fruits, made subject to license.
- September 9. Exchange certificates from the Office of Foreign Exchange required for payment of imports of dried fruits.
- October 1. French import license tax reverted to 32 francs per 100 kilograms for apples and 48 francs per 100 kilograms for pears. Beginning in 1937, these taxes were reduced to 16 and 24 francs respectively, but the lower rates expired and were not renewed.
- November 16. French Government informed the American Embassy regarding import policy that permits to import American fresh apples and pears would probably not be issued, at least until late in March 1940.

Other European Countries

Germany 5/

German foreign trade, imports and exports were under strict government regulation for a number of years before the war. Imports of fruit have been under the control of the Reich Monopoly Office (Reichstelle) for Horticultural Products.

Notherlands

Effective August 28, 1939, control over imports and exports of fruit established. Exports controlled by the Netherlands Vegetable and Fruit Control Organization. Later, government announced prohibition of extension of fruit acreage.

Belgium

- July 31, 1939. Import permits required for wide variety of fruit including apples, pears and plums.
- September 18. Ministerial decree made export and transit of dried fruit subject to license of Ministry of Economic Affairs.
- November 16. Export and transit restrictions cancelled for apples, pears and grapes.

Switzerland

Regulations issued under authority of "Assurance of the Country's Supply of Essential Commodities" of April 1, 1938.

September 4, 1939. Exports of practically all items, including fruit, made subject to export permits and taxes.

^{5/} For fuller details, see "Wartime Agricultural and Food Control in Germany", by H. L. Franklin, in "Foreign Agriculture", April 1940.

September 15. Purchase of fruit for resale made subject to permit.

September 23. Export and transit trade to France exempted from import and export licenses.

Spain

September 12, 1939. Marketing scheme for Malega muscatel raisins announced, providing comprehensive authoritarian control.

Denmark

September 27, 1939. Licenses required for imports of dried fruit.

December 16. Imports of apples permitted during 1940 only from April 1 to August 1.

Finland

September 16, 1939. All imports, including fruits, subject to import licenses issued by Finnish License Committee.

Rumania

October 9, 1939. Exports of fruit subject to license issued by the Local Price Committee.

Greece

September 10, 1939. All imports subject to special authorization of the Ministry of National Economy.

September 19. Exports of fresh fruit subject to special authorization of the Ministry. Export permit from Bank of Greece required for export of currents and figs.

Italy

September 4, 1939. Exports of some fruits made subject to license.

Yugoslavia

September 14, 1939. Export of prunes again placed under exclusive control of the Government-owned Privileged Export Company.

September 18. Import license system extended to include all products.

Other Countries

Argentina

September 21, 1939. Imports of dried prunes prohibited.

October 7. Imports of fresh fruit from the United States up to December 31, limited to an amount equivalent in value to 80 percent of imports during the second half of 1938, applying the non-preferential rate of exchange of 17 pesos to the United Kingdom pound sterling or 23.65 United States cents.

November 7. Unlimited importation of American apples permitted up to January 31, 1940.
